

Kitchens • Baths • Countertops

Michigan has a great deal of variation in the humidity; this causes settling and the caulk will most likely crack within the first year. Caulking will be a normal maintenance item and is not covered under our warranty. We left grout caulk that matches your job. Please store according to the packaging and use as needed.

You will see in these images a few examples of what to expect to see along your countertops, bathtub or corners.

To repair you may need a caulk gun, utility knife, putty knife/scrapper, and painters tape.

Step 1: Scrape caulk from seam using a utility knife or plastic putty knife/scrapper.

Step 2: Clean area well and allow to fully dry.

Step 3: If desired use painters tape on either side of seam to help with neat lines. Use caulk gun to apply grout caulk along seam. Smooth with clean wet finger and remove excess. Remove tape before caulk dries. See recommended drying times before cleaning.

We are more than happy to complete this task at a charge of a \$75 trip fee and \$75 per hour we are there.

Sincerely,

The New Design Team
